DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Group I, claims 1-2 in the reply filed on December 21, 2005 is acknowledged. The traversal is on the ground(s) that the unity of invention exists between the claims of Groups I and II. This is not found persuasive. As indicated the rejection requirement in the previous Office action mailed Nov. 21, 2005, the process of making propylene polymer of Group I does not necessarily produce the specified propylene polymer of Group II with the specified limitations (1) -(3) of claim 3, and a highly flowable propylene-based polymer does not have to satisfy the limitations (1) -(3) of claim 3. Therefore, there is not unity of invention between Groups I and II. .

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, the limitation of "highly flowable propylene based polymer" is indefinite due to the use of the relative term of "highly flowable" and such a term is not defined.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 1713

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Kijima (WO 01/96490, its English equivalent, US 6,797,774, is referred to in the rejections hereinafter for convenience) and Okamoto et al (EP 1 227 112) independently.

Kijima teaches the process for prepare a propylene polymer with an intrinsic viscosity of 0.01 to 2.0 dl/g in the presence of a double bridged metallocene of formula (I) and cocatalyst of (B-1) as shown in col. 2, line 32 to col. 3, line 32, and col. 4, line 22 to col. 5, line 36. Kijima's teaching encompasses the instant claims.

Okamoto teaches the process for prepare a propylene polymer with an intrinsic viscosity of as low as 0.5 dl/g in the presence of a double bridged metallocene of formula (I) and cocatalyst of (B-1) as shown on page 3, lines 15-58 and page 18, lines 11-32. Okamoto's teaching encompasses the instant claims.
